### ABOUT ME

Passionate in building data-driven and AI-powered systems that make an impact. I've developed emotion recognition, emotional text-to-speech, and early lung disease detection models, integrating them into functional web platforms. I thrive at the intersection of data, AI, and web development, turning technical ideas into real, usable solutions that help people and drive meaningful change.

### EXPERIENCES

- |   |                              |
